

Pelactiv

VISIBLY HEALTHY SKIN

What is Ultrasonic Infusion?

Our skin provides a barrier, mainly through lipids (oils) between skin cells. Ultrasonic vibration is used to disrupt this barrier allowing deeper infusion of topical active ingredients.

Ultrasonic Infusion allows for rapid and intense absorption of these important ingredients to rapidly improve the appearance of skin, making it appear smoother, younger and healthier.

How does Ultrasonic Infusion work?

Ultrasonic Infusion uses ultrasound vibration to momentarily create little spaces in the outer layers of the skin, by disrupting the barrier and allowing greater absorption of applied product.

By combining the infusion technique with the application of Pelactiv high performance serums (Energizing & Hydrating, Lifting & Firming and Vitamin C) the overall appearance of the skin looks visibly healthier, pigmentation lightens, skin texture and fine lines improve dramatically.

Why should I have Ultrasonic Infusion?

- increased skin suppleness and glow
- visible results immediately after treatment – no downtime
- lifts and lightens skin
- increase in collagen and elastic production
- increases blood and lymph flow, detoxifies
- can be combined with other procedures eg Peels, Micro-Dermabrasion and LED Light Therapy to increase their effects

Which skin conditions can be helped with Ultrasonic Infusion?

- pigmented, uneven skin tone
- fine lines
- ageing skin
- thickened skin
- dehydrated/dry and devitalised skin

Who Is Ultrasonic Infusion Recommended for?

All skin types requiring a smoother and firmer complexion with more even skin tone. Not suitable for acne/problematic skin.

Is there downtime associate with Ultrasonic Infusion?

No. There is no downtime or skin damage associated with Ultrasonic Infusion.

How many treatments are recommended?

For best results it is recommended to have a series of 6 treatments.
